

Show Customers Where You Work: Why a Service Area Map Belongs on Your Website

If your business serves customers beyond the city of Madison—say, in Sun Prairie, Verona, Waunakee, or Stoughton—you might be missing one simple thing on your website that could help bring in more business: a service area map.

Wait, What's a Service Area Map?

A service area map shows exactly where your business operates. It's a visual representation of your coverage area, whether that's a 30-mile radius around Madison or a specific set of surrounding towns. Instead of listing place names in a paragraph, you show it on a map.

It takes up less space, looks better, and tells customers right away: "Yes, we serve your area."

Why Madison Businesses Should Use One

Here in Dane County, many businesses are mobile. Landscapers, roofers, cleaning companies, delivery services, electricians—they don't just work in one ZIP code.

Adding a service area map to your website helps in a few key ways:

- **Builds trust** – Customers see their town included and feel confident calling you.
- **Boosts local SEO** – Google gets better signals about where your business operates.
- **Reduces confusion** – Fewer calls asking "Do you come to Cottage Grove?"
- **Looks professional** – A clean, branded map stands out more than plain text.

This Used to Be a Pain... But Not Anymore

In the past, adding a map like this meant messing around with Google Maps API keys, billing accounts, and complicated plugins. Most business owners didn't bother, and even many web designers avoided it.

But a free tool called ServiceAreaMaps.com makes it fast and easy. Just type in your address, choose a radius, and copy the embed code into your site. That's it. No logins, no billing setup, and no technical headaches.

It works great on WordPress, Squarespace, and even old-school HTML websites.

Here's how it looks – a live example:

Want One? Go Now.

Whether you're serving the greater Madison area, or have a more specific set of towns in mind, make sure your website shows it clearly with a custom map built using ServiceAreaMaps.com.
